Professional Summary

Final-year Information Security student at UIT, seeking an entry-level SOC Analyst position. CCDL1-certified with hands-on experience in security monitoring, log analysis, threat detection, and incident investigation using Splunk, Sysmon, and Suricata.

Education

University of Information Technology, VNU-HCM (UIT) Expected Jan. 2027
Bachelor of Information Security, GPA: 3.12/4

Certifications

Certified CyberDefender Level 1 (CCDL1) — CyberDefenders *(Issued: 4 Oct 2026)* Badge

Experience

CONG TY TNHH THUONG MAI DICH VU VHOST.VN Jun. 2026 – Sep. 2026
System Intern *Ho Chi Minh City*

- Administered Ubuntu and AlmaLinux servers; troubleshot system, network connectivity, routing, and DNS issues.
- Implemented security controls, including SSH hardening, iptables firewall rules, WireGuard VPNs, and TLS certificates.
- Analyzed Linux system, authentication, and firewall logs to investigate access failures and security misconfigurations.

Projects

SOC Monitoring & Detection Home Lab GitHub
Splunk, Sysmon, Suricata, OPNsense, MITRE ATT&CK

- Designed and deployed a segmented SOC home lab using Proxmox VE, VMware, and OPNsense to simulate attacks against Windows and Linux environments.
- Centralized Windows Security, Sysmon, Linux, OPNsense firewall, and Suricata IDS logs in Splunk for endpoint and network security monitoring.
- Developed and validated **12 SPL detection rules** across **8 simulated attack scenarios**, mapping detection logic to MITRE ATT&CK techniques.
- Investigated security alerts and documented **4 incident reports** with event timelines, supporting log evidence, and response recommendations.

Evidence-Grounded Incident Summarization for SOC Analysts | *In Progress (Oct. 2026 – Present)* GitHub
Python, Splunk API, RAG, NLI, LLM, FastAPI

- Developing an evidence-grounded incident summarization pipeline integrating Splunk telemetry, RAG, and LLM-generated reports with traceable evidence citations.
- Designing hybrid rule-based and NLI-based evidence verification to classify incident claims as Supported, Contradicted, or Insufficient.
- Implementing critical-fact omission detection and controlled summary repair to address missing information and unsupported claims.
- Targeting an **80 incidents** evaluation dataset (40 train, 10 validation, 15 in-domain test, 15 OOD test) to evaluate factual accuracy, citation support, critical-fact recall, and cross-environment robustness.

Technical Skills

SOC & Monitoring: Splunk, SPL, Log Ingestion, Windows Security Events, Sysmon
Detection & Investigation: PCAP analysis, Wireshark, basic incident investigation
Network Security: Suricata, Snort 3, OPNsense, tcpdump
Systems & Scripting: Linux, TCP/IP, DNS, HTTP(S), TLS, Python, Bash

Languages

English: TOEIC Listening & Reading: 550/990 | Speaking & Writing: 240/400
